

- Place the ring on the paper so that POSITIONING LINE No. 1 on the RING is aligned with the vertical line labeled "RED". Make a small dot with the Red Marker through Hole No. 1 on the RING. Then choose a hole in the WHEEL and align the positioning line for that hole with POSITIONING LINE No. 1 on the RING. Draw a Spirograph pattern with the Red 3D Marker.
- Lift and move the RING straight to the right so that POSITIONING LINE No. 1 on the RING is aligned with the vertical line labeled "BLUE" and Hole No. 1 on the RING is aligned horizontally with the red dot mark you made in the first step. Using the same wheel hole you used for the red design, align the positioning line for that hole with POSITIONING LINE No. 1 on the RING. Draw a Spirograph pattern with the Blue 3D Marker.
- There should now be two identical designs separated horizontally by one or two grid squares—a red design on the left and a blue design on the right. Put on the 3D glasses to see the design pop off the page! Hint: The center boxes below will create a more dramatic 3D effect by spacing the red and blue designs two grid squares apart. It may take a little longer to see the 3D effect with the 3D glasses. If you don't see it right away, try holding up the page at arm's length and focusing on a corner of the page instead of on the design.
